Global Actuarial Executive | Insurance Risk Strategist | AI & Data Science Advocate

Murshid Ali Kuttihassan is a global actuarial and risk consulting leader with over 25 years of experience spanning India, the United States, and Canada. He currently heads the actuarial function at EY Global Delivery Services (EY GDS) and serves as the AI Lead for the Financial Services Risk Consulting (FSRC) team. In this role, he leads a 200+ member cross-functional team delivering end-to-end actuarial, analytics, and AI-driven solutions across Life, Health, Property & Casualty, Pension, and Investment domains.

Before joining EY, Murshid built and scaled one of the world's largest offshore actuarial delivery centers at MetLife, supporting more than 40 countries with advanced capabilities in valuation, asset-liability management, pricing, experience studies, and reinsurance. His career uniquely bridges actuarial science and technology—having started as an engineer with six years of hands-on software development and data systems experience before moving into actuarial and risk leadership.

Murshid holds two master's degrees—one in Mathematics from Arizona State University and another in Actuarial Science from the University of Waterloo—along with a Bachelor's in Engineering. He is a Fellow of the Society of Actuaries (FSA), the Canadian Institute of Actuaries (FCIA), and the Institute and Faculty of Actuaries (FIA). He also holds the CFA, FRM, CERA, IFRI, and SCJP designations and is currently pursuing the Certificate in Quantitative Finance (CQF).

A strong advocate of AI and data science in insurance, Murshid combines technical depth with strategic foresight and ethical leadership. He believes the actuary of tomorrow must go beyond technical mastery—to become a storyteller, strategist, and change agent capable of influencing enterprise-wide decisions and driving innovation across the insurance value chain.
